Jyka System Panelboards

Improved panelboard with new Hager chassis

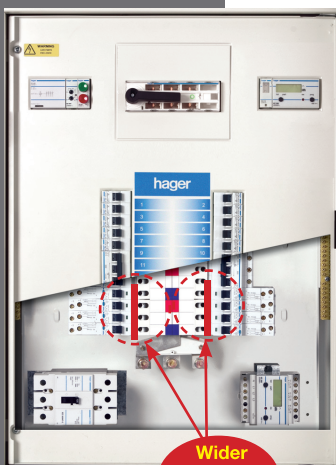

Fitout of protection devices is greatly improved with the newly modified hager chassis.

The plastic moulding at the top of the chassis has been widened. Simply push the breaker onto the chassis until it meets the moulding and tighten. This ensures correct positioning when the escutcheon is closed.

The new chassis will roll out across our entire panelboard range through 2008.

Also enquire about our existing chassis clearance special. *(Whilst stocks last)...*

For more information contact your local Hager B&R representative on 1300 850 253.
